Boeing now offers 737-600/-700/-800/-900 operators a common display system enhancement that takes full advantage of the best navigation system available in commercial aviation today. The new displays involve lateral and vertical navigation deviation scales that reduce the already low required navigation performance rating of the new 737 family.

A flight management system (FMS) is a fundamental component of a modern airliner's avionics. An FMS is a specialized computer system that automates a wide variety of in-flight tasks, reducing the workload on the flight crew to the point that modern civilian aircraft no longer carry flight engineers or navigators. A primary function is in-flight management of the flight plan.
