Pulmonary hypertension is a type of high blood pressure that affects the arteries in your lungs and the right side of your heart. In one form of pulmonary hypertension, called pulmonary arterial hypertension (PAH), blood vessels in your lungs are narrowed, blocked or destroyed.

Pulmonary hypertension - Symptoms and causes - Mayo Clinic

End-stage, or stage 4, COPD is the final stage of chronic obstructive pulmonary disease. Most people reach it after years of living with the disease and the lung damage it causes.

End-Stage COPD (Stage 4): Symptoms, Treatments, Prognosis

COPD is a serious condition that can eventually reach a stage where it becomes life threatening. Talking about this and planning your end of life care, also called palliative care, in advance can be helpful. It can be difficult to talk about dying with your doctor, and particularly with family and friends, but many people find it helps.
