Water and food security | International Decade for Action ...

However, the way the international community approaches water security and food security remains segmented. The Sustainable Development Goal targets for water do not mention food security much, Tiboris said, and "the WASH [Water and Sanitation for Hygiene], drinking water, and agriculture development communities have been somewhat siloed from one another" both financially and administratively.

Better Water Security Translates into Better Food Security

Water security is food security Managing water resources shapes how we feed the world today and in the future Adoption of early warning systems for severe weather Expanded and improved irrigation and water storage systems Creation of marine protected areas Agricultural Innovation Governments, the private sector and civil society can invest in...

Water security is food security

Water and Food Security At the core of food security is access to healthy food and optimal nutrition. Food access is closely linked to food supply, so food security is dependent on a healthy and sustainable food system. The food system includes the production, processing, distribution, marketing, affordability, and consumption of food.

Water and Food Security - GWP

Therefore, better water management is crucial to global food and nutrition security. Obviously, irrigation is key to increasing food production and farm income and improves resilience against weather variability. But water also affects food security and nutrition through other pathways.

Food security depends on water security - and we need to ...
